

Autoreponder Code Replacement

How to add your autoresponder code to the squeeze page:

Open the file in an HTML or text editor such as Notepad (Windows) or TextEdit (Mac).

Locate the following code:

```
<!REPLACE THE FOLLOWING CODE SECTION WITH YOUR AUTORESPONDER CODE>
  <h2 class="style3">Enter your name and email address below to download!</h2>
  <p align="center"><span class="style3">Your Name:</span>
    <input name="textfield" class="textfield" id="textfield" type="text">
  </p>
  <p align="center"><span class="style3">Your Email:</span>
    <input name="textfield2" class="textfield" id="textfield2" type="text">
  </p>
  <p align="center">
    <input name="button" class="submit-button" id="button" value="" type="submit">
  </p>
<!REPLACE THE FOLLOWING CODE SECTION WITH YOUR AUTORESPONDER CODE>
...
```

Replace everything BETWEEN the code that says...

<!REPLACE THE FOLLING CODE SECTION WITH YOUR AUTORESPONDER CODE>

...with your autoresponder code.

Save the file.

Open the file in a browser to be sure the code has been properly placed.

NOTE: You MAY need to upload the page to your server before you can see the changes. Some autoresponder networks may use code that won't show up correctly unless the site is online.
